

Rohit Pandey

Data Analyst – Quality & Data Evaluation

+91 9999477194 | rohit.taurus08@gmail.com | [Github](#) | [LinkedIn](#)

Summary

Data Analyst with 7+ years of experience delivering SQL-driven analysis, Power BI dashboards, and business reporting to support operational and performance decision-making. Currently working at **HireX Corp**, building automated reports, performing exploratory data analysis, and translating complex business questions into actionable insights. Skilled in SQL, Power BI, Python, and Excel, with hands-on experience in KPI development, data modeling, trend analysis, and stakeholder-facing analytics across client datasets.

Skills

- **Analytics & Visualization:** Power BI, Advanced Excel (Pivot Tables, Lookups, Power Query)
- **Data Analysis:** EDA, KPI & Metric, Trend & Variance Analysis, Data modelling, ad hoc analysis
- **Languages & Querying:** SQL, Python
- **Tools & Platforms:** ServiceNow, OpenAI, Workbench, PostgreSQL, VSCode, Jupyter Notebook, Pandas, Jira
- **Reporting & Operations:** Dashboarding, Data Validation, Business Reporting, Stakeholder Support

Professional Experience

Data Analyst

HireX Corp | Remote

Apr 2024 – Present

- Build SQL queries and Power BI dashboards to analyze sales, customer behavior, and operational KPIs for client datasets, enabling data-driven business decisions.
- Clean, transform, and model multi-source data (CSV / Excel / SQL) to create unified reporting tables for performance tracking.
- Automate recurring Excel and Power BI reports, reducing manual reporting effort by ~40%.
- Perform exploratory data analysis (EDA) to identify trends, anomalies, and improvement opportunities across transactional data.
- Deliver ad-hoc analysis and visual insights to stakeholders, translating business questions into actionable metrics and dashboards.

Data Analyst

Kyndryl – Gurugram, India |

Apr 2022 – Feb 2024

- Generated ad hoc and recurring analytical reports using Power BI to support client and internal stakeholder reporting needs.
- Used SQL to extract and analyze departmental data, building Power BI dashboards that highlighted cost drivers and inefficiencies, contributing to ~10% cost reduction within scoped areas.
- Analyzed large datasets to identify patterns and trends, working primarily with structured operational data and selectively incorporating semi-structured inputs where relevant.
- Collaborated within an Agile/Scrum environment, participating in sprint planning, backlog grooming, and reviews to align analytical work with business priorities.
- Worked closely with data quality, data governance, and data strategy teams to ensure reporting accuracy, consistency, and adherence to data standards.

Freelancer – Data & Technical Analyst

GoTradeIndia | Remote

Apr 2020 – Feb 2022

- Analyzed financial price charts using rule-based technical indicators to identify trend patterns, support/resistance levels, and momentum signals.
- Prepared structured chart visualizations and written analysis summaries for a Discord-based trading community to support informed, rule-driven decision-making.
- Designed and maintained an Excel-based dark-mode trading journal to **log trades, calculate brokerage charges, net P/L, and platform-wise costs across multiple brokers**, supporting post-trade analysis and review.

Junior Data Analyst

IBM – Gurugram, India

Oct 2017 – Jul 2019

- Collaborated with a senior team member to automate Excel-based validation of incident data sourced from an API, replacing manual comparisons and improving consistency of operational checks.
- Analyzed incident and request datasets across high-volume support workflows (**~500 tickets/week**) to identify recurring issues, data quality gaps and SLA timelines.
- Prepared structured summaries and analytical observations from operational data to support quality reviews, audit readiness, and decision-making by senior analysts and team leads.

Projects

- [E-Commerce Order Analytics](#)
 - Built SQL + Power BI dashboards to analyze sales, customers, and product performance
 - Identified revenue trends and top categories through data aggregation
 - Performed data cleaning, joins, and time-based analysis across multiple datasets to build a unified sales model.
- [Automated Data Cleaning Pipeline](#)
 - Automated cleaning of Excel and CSV files using Python and Pandas to produce analysis-ready datasets.
 - Standardized column names and validated required fields to handle inconsistent raw data.
 - Built a CLI-based workflow to process multiple files in one run without altering source data.
- [Financial Reporting & Expense Analysis](#)
 - Built financial dashboards tracking expenses, EMIs, and monthly trends
 - Converted raw finance data into KPIs for budgeting insights
 - Structured multi-source financial records into organized tables to enable accurate monthly reporting and expense categorization.

Education

Bachelor of Computer Applications (BCA) | Delhi

Jagannath Institute of Management Science

July 2014 - May 2017
